

### **Abstract of the Disclosure**

A skin care device is provided for cleaning of a person's body which comprises a knitted cloth of a plurality of synthetic spun ply yarn strands, preferably acrylic spun  
5 ply yarn strands. The plurality of synthetic spun ply yarn strands include twisted synthetic single yarn threads of synthetic fiber. The preferred range of twists for the synthetic single yarn is 8.85 to 9.39 twists per inch, and the preferred range of twists for the synthetic spun ply yarn strands is about 6.0 twists per inch to 6.39 twists per  
10 inch. The cloth is stitched using the plurality of synthetic spun ply yarn strands. The cloth defines a plurality of edges which are preferably finished by first being marrowed and then crocheted.
